BUILDING & FORMATTING CHARTS

The **Format** menu allows you to quickly add common chart elements (*title, axis labels, data labels, legends, etc.*) and access additional options and properties in the Format pane

- This is a **contextual menu**, so you will only see options which are relevant to the selected visual

Enable **on-object formatting** by double-clicking the chart object (*or right-click > format*), which allows you to select and edit individual chart elements

- On-object formatting is only available for certain visuals (bar, column, line, area, combo & scatter)

FILTERING OPTIONS

There are **3 types of filters** accessible from the **Filters** pane*:

- Visual-level** filters apply to specific visuals
- Page-level** filters apply to all visuals on the report page
- Report-level** filters apply to all visuals across all report pages

***Drillthrough** filters can be configured in the page formatting pane – more on that later!

DRILL UP & DRILL DOWN

Build a visual

Visual types: [Line chart selected]

Suggest a type: [Start of Month selected]

X-axis: [Start of Month selected]

Y-axis: [Total Revenue selected]

Drill Up and Drill Down tools allow you to switch between different levels of granularity

- In this example users can “drill up” from **weekly** to **monthly**, or “drill down” to **daily**
- The single down arrow activates **drill mode**, allowing users to drill by clicking data points
- The forked down arrow **expands each level** of the hierarchy (used in matrix visuals)

PRO TIP: Use **location hierarchies** and enable drill mode to create interactive map visuals
